

Lingxu Liu

Applied AI and Agent Engineer | Backend Engineer

Hong Kong | 69158920 | 15344555700@163.com | github.com/RiderVVV | ridervvv.github.io/resume

PROFESSIONAL SUMMARY

Senior backend engineer with eight years of experience building high-scale systems in AI marketing, IoT, and education. Extensive background in Golang, distributed services, and real-time data processing. Currently pursuing an MSc in Data Science with a focus on applied AI, agent engineering, and machine learning for business.

SKILLS

Languages Python, Golang, SQL

AI / Data Machine Learning, Deep Learning, NLP, Text Classification, Image Classification, Data Preprocessing, Model Evaluation

Engineering Distributed Systems, RESTful APIs, ETL Pipelines, Performance Optimization, Rule Engines, CI/CD

Frameworks / Tools PyTorch, scikit-learn, pandas, Spark, Git, GitLab, Jenkins, Gradle

EDUCATION

MSc Student in Data Science | Lingnan University

Hong Kong | Sep 2025 - Present

Specialized in machine learning, deep learning, and big data analytics.

- Completed coursework projects in document and image classification.
- Managed group project leadership and developed AI system designs.
- Integrated backend engineering experience with postgraduate studies to transition into applied AI and agent engineering roles.

PROFESSIONAL EXPERIENCE

Backend Engineer | Shenzhen Donson Times Information Technology

Shenzhen | Jul 2024 - Aug 2025

Developed inSai Hilight, an AI-native marketing video multi-agent platform.

- Managed three product iterations and technical solution designs for release cycles.
- Refactored content collection modules, which reduced code complexity by 50% and decoupled KOL account and homepage link logic by 40%.
- New feature development cycles shortened by 30% after these updates.
- Migrated large content and brand tables from Gauss to Doris and adopted hot-reload workflows.

Golang Developer | Wanjiaan IoT Technology

Shenzhen | May 2021 - Apr 2024

Built backend services for IoT device access, telemetry, and real-time data processing on a SaaS cloud platform.

- Optimized ETL pipelines, concurrency, and distributed processing to increase throughput.
- Developed the rule-engine, automation, alerting, and firmware upgrade systems.
- Upgraded security through new authentication and data transmission protocols.
- Managed the IoT Hub platform and notification system, which supported over 10 million device connections and 1 million tasks per second.

Golang Developer | Beijing Limi Technology

Beijing | Sep 2016 - Mar 2021

Built backend systems for education orders, products, and monitoring.

- Developed high-performance order flows for payments, cancellations, and refunds.
- Integrated third-party payment systems and used distributed transactions to ensure data consistency.
- Scaled online education operations using microservices, containerization, and database tuning.

SELECTED PROJECTS

Document Classification Big Data Pipeline

2026

- Created a classification pipeline for invoices, inventory reports, and shipping orders using TF-IDF and Logistic Regression.
- Attained 99.81% accuracy and 0.9963 macro F1.
- Led the modeling and integration phases.

Waste Classifier with ResNet18

2026

- Developed an image classification system for organic and recyclable waste using PyTorch and transfer learning.
- The ResNet18 model reached 92.88% accuracy and 0.9144 F1.
- Deployed the tool through a Gradio interface.

EDUCATION

Lingnan University

Expected Jun 2026

MSc in Data Science

Harbin University

Jun 2016

Bachelor's in Accounting
