

Lingxu Liu

Applied AI and Agent Engineer | Backend Engineer

Shenzhen, China | 13011068922 | 15344555700@163.com | github.com/RiderVVV | ridervvv.github.io/resume

PROFESSIONAL SUMMARY

Backend engineer with 8 years of experience building scalable systems across IoT and education technology. Strong background in Golang, distributed services, real-time data processing, and system optimization. Currently focusing on applied AI, agent workflow orchestration, and practical AI product development through postgraduate study in Data Science and Machine Learning for Business.

SKILLS

Languages	Python, Golang, SQL
AI / Data	Machine Learning, Deep Learning, NLP, Text Classification, Image Classification, Data Preprocessing, Model Evaluation
Engineering	Distributed Systems, RESTful APIs, ETL Pipelines, Performance Optimization, Rule Engines, CI/CD
Tools	PyTorch, pandas, scikit-learn, Spark, Gradio, Git, Jupyter Notebook, TF-IDF, Logistic Regression, ResNet18

PROFESSIONAL EXPERIENCE

Golang Developer Wanjiaan IoT Technology Worked on AIoT cloud platform development within the SaaS team. - Designed and implemented scalable backend services for IoT device access, telemetry collection, and real-time data processing. - Built ETL pipelines and optimized concurrency, caching, and distributed processing to improve throughput and platform stability. - Developed rule-engine, automation, alerting, remote management, and firmware upgrade capabilities for SaaS platform operations. - Improved security through authentication, authorization, and data transmission enhancements.	Shenzhen May 2021 - Apr 2024
Golang Developer Beijing Limi Technology Worked on education platform backend systems, including order, product, user, and monitoring services. - Designed and developed high-performance order services covering creation, payment, cancellation, and refund flows. - Integrated third-party payment systems and implemented distributed transaction handling for data consistency. - Built user management, course management, and monitoring features for online education operations. - Improved scalability with microservices, containerization, database tuning, caching, and message queues.	Beijing Sep 2016 - Mar 2021

SELECTED PROJECTS

AI Marketing Video Workflow - Built an AI workflow to automate e-commerce marketing video production across script generation, asset retrieval, and rendering. - Focused on tool chaining, workflow integration, and backend stability for multi-step generation.	2024 - 2025
IoT Device Access Platform (IoTHub)	2021 - 2024

- Led backend architecture and implementation for a high-scale IoT access platform supporting camera and device connectivity.
- Reached 10 million+ terminal connections and close to 1 million computation tasks per second.

Alert and Notification System

2021 - 2024

- Designed a configurable rule-driven alerting system with multi-channel notification support.
- Reduced fault handling time by 30 percent with sub-second alert generation and 99.9%+ notification delivery rate.

EDUCATION

Lingnan University
MSc in Data Science

Expected Jun 2026

Harbin University
Bachelor's in Accounting

Jun 2016
